

ECR Interface

ECR INTERFACE module

L-BOSS is designed to offer in-store control mechanisms that assist with day-to-day business activity and reduce the workload for store personnel.

The combination of L-BOSS and TEC ECRs make operations easier by allowing a computer to be used for programming products and retrieving sales data from the register. Statistical information compiled in the register is polled by L-BOSS automatically and stored in a convenient database that provides access to data even though the register contents have been cleared.

This means that none of the pertinent information you need to run your business is cleared at day end.

LOGIVISION

210 Laurier, Beloeil, Quebec, Canada J3G 4G7
Tel : 450. 464.2131 Fax : 450. 464.5673

System features include:

Item maintenance

- Program PLUs and related tables such as bottle deposits.
- Price changes can be made in the batch module for activation by date.
- Promo sales can be created by batch with a start and end date.

Cashier maintenance

- Create cashiers on backend PC for transfer to the ECR.
- Keep employee information including name, phone number, address, employment date, etc.

Retrieve sales reports from ECR

- Financial information report.
- Cashier report.
- Hourly sales report.
- Department report.
- PLU report.

Merge data into L-BOSS report database

- Provides statistical reports per day, week, month, year or other.
- Allows comparative analysis between periods, stores, etc.

Integrates with L-BOSS to allow use of inventory, batch and label system.

- Stock level is reduced when products are sold and the ECR has been polled.
- Use the batch system to create items for date activated deploy at the register.
- Label system is fully compatible with the ECR.

The L-BOSS event menu includes the options required to communicate and maintain the TEC ECR.

This means that the internal scheduler will take care of things for you even when you have gone home to rest.

System requirements
